

Dr. Peter McCullough: Vaccine Mandates Should Be Repealed

Dec. 29th, 2021

COVID-19 vaccine mandates “have to be repealed” as the vaccines are “still in research” and “people cannot be mandated to participate in research,” says Dr. Peter McCullough.

McCullough, a cardiologist, epidemiologist, and internist who manages COVID-19 patients with heart-related complications and patients who become ill after receiving a COVID-19 vaccine, contends that COVID-19 vaccine mandates violate the Nuremberg Code.

“When it comes to research, research can only be voluntary. And under no circumstances can anyone receive any pressure, coercion, or threat of reprisal—cannot. It violates the cornerstone of ethics; it’s unethical, it’s immoral to do that,” he says.

McCullough notes that the CDC and FDA have yet to publish “their first monthly safety report” on the vaccines, and that as of Dec. 17, the CDC’s VAERS (Vaccine Adverse Events Reporting System) has reported 20,622 deaths post-vaccination and over 983,000 adverse events.

While VAERS has issued a disclaimer discouraging the interpretation of its data “to reach conclusions about existence, severity, frequency, or rates of problems associated with vaccines,” McCullough says that the system’s death reports deserve serious attention.

He cites a June 2021 analysis of VAERS COVID-19 vaccine death reports led by the University of London’s Scott Mclachlan. Mclachlan found that “contrary to claims that most of these reports are made by lay-people and are hence clinically unreliable,” health service employees were the reporters at least 67 percent of the time, and “there were only 14 percent of the cases for which a vaccine reaction could be ruled out as a contributing factor in their death.”

COVID-19 vaccines commonly used in the United States use genetic mechanisms to install genetic material into cells, and then the cells produce the spike protein of the virus, says McCullough. “That’s the mechanism of the spike protein, it’s the dangerous and lethal part of the virus.”

The “uncontrolled quantity and duration of spike protein” produced by the vaccine in the human body “almost certainly is the proximate cause of death,” according to McCullough.

McCullough said that the data satisfy all five of the Bradford Hill criteria, a framework scientists use to work out whether one thing is causing another. In this

case, because COVID-19 vaccination data satisfies the Bradford Hill principles, McCullough says that reported deaths are highly likely caused by COVID-19 vaccinations.

McCullough also mentioned the “non-fatal events that just go right along” with COVID-19 deaths which makes it more plausible that the vaccines are causing adverse reactions and in turn, deaths.

VAERS has recorded more than 20,000 reports of death post-vaccination according to its database. Between January 2021 and October 2021, more than 1,000 deaths were reported per month, with over 3,000 deaths reported as having occurred on an unknown date.

The CDC (Centers for Disease Control and Prevention) reported 10,483 deaths to VAERS between Dec. 14, 2020, and Dec. 13, 2021.

A lawsuit was recently filed against the FDA by a medical transparency group, Public Health and Medical Professionals for Transparency (PHMPT) formed by a group of doctors and scientists, including Harvey Risch, a professor of epidemiology at the Yale School of Public Health.

The FDA has asked a judge to grant it 75 years to fully release the documents in its possession tied to the approval of the Pfizer-BioNTech COVID-19 vaccine.

Aaron Siri, a lawyer working on the case, on Dec. 8 wrote, “If you find what you are reading difficult to believe—that is because it is dystopian for the government to give Pfizer billions, mandate Americans to take its product, prohibit Americans from suing for harms, but yet refuse to let Americans see the data underlying its licensure.”

Since its initial announcement of vaccine mandates in both the federal and private sectors, the Biden administration has emphasized that “vaccines are safe, free, and the most effective way for workers to be protected from COVID-19 transmission at work.”

The Epoch Times reached out to the CDC and the White House for comment.
